DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 13, 14, 21-27, and 30-34 are rejected under 35 U.S.C. 102(e) as being anticipated by Shiue et al (6,816,548).

Regarding claims 13, 14, 21-27, and 30-34, Shiue, as shown in figure 1, teaches a receiver comprising recovery unit and phase recover unit (14, 18, 19, 15, 17), channel equalizer (50) for removing pre-ghost and post-ghost, and Trellis decoder (60) having de-interleaver and Reed-Solomon demodulating. See also column 2, lines 35-63; column 4, lines 6-22 and column 7, lines 5-15.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 35-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shiue et al (6,816,548) in view of the admitted prior art figure 2 of the instant application.

Regarding claims 35-37, Shiue teaches all subject matter claimed except for feedbacking the output of the Trellis decoder to the feedback filter. See explanation of paragraph 2 above. However, the admitted prior art figure 2 of the instant application teaches using the output of the Trellis decoder (70) to feedback to the feedback filter (30) for effectively removing post-ghost. See also paragraphs [0011] - [0018] of the instant application. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the receiver of Shiue et al by using the output of the Trellis decoder (60) to feedback to the feedback filter (30) as taught by the admitted prior art so that post-ghost can more effectively be removed.

Allowable Subject Matter

6. Claims 1-12 are allowed over prior art of record.
7. Claims 15-20, 28 and 29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References Patel (6,222,592), Limberg et al (6,313,882), and DSouza (2003/0001974) are cited because they are pertinent to the receiver having channel equalizer to remove ghosts.
